ONLINE TRAINING COURSES & PRICING

TRAINING OPPORTUNITIES

CPSG-U Virtual Dealer Training

is designed to help businesses scale through staff education. The platform brings structure to our client's learning and development programs, allowing owners to track and log progress. These self-paced courses are populated with rich content and delivered in interesting formats consisting of training aids, videos, and assessments.

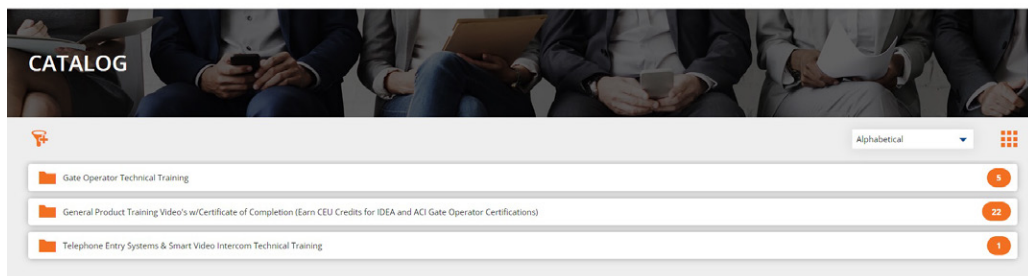

To access all courses, navigate to learning.cpsgu.com, login, and click on Catalog.

Catalog

See a complete list of available courses

From the Catalog view, you will see three categories.

Gate Operator Technical Training – Manufacturer agnostic technical training based on industry best practices.

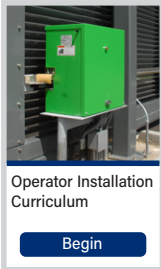

General Product Training Video's – Product overviews that can be used for IDEA/ACI CEUs. Most of the content is "non-technical."

Telephone Entry Systems & Smart Video Intercom Technical Training – Training on visitor management systems based on new and old technology.

GATE OPERATOR TECHNICAL TRAINING

This section includes Manufacturer agnostic technical training based on industry best practices.

Featured Course – Operator Installation Curriculum

This curriculum covers the core disciplines of Gate Automation. It provides the best opportunity for installers, technicians, and salespeople to develop well-rounded skills. Mastery of this curriculum will yield "Journeyman" status professionals.

***\$500 Per Learner - (\$400 Savings)**

(General access to the portal requires an annual \$50 subscription)

Operator Installation Individual Courses & Descriptions

If Purchased Separately

Types of Gates & Operators

Discusses features and functionality differences and considerations for different types of gates, as well as differences and commonalities in gate operators.

\$0

ASTM F2200

Covers all the ASTM F2200 requirements for building and installing gates intended to be automated.

\$150

Basics of Electricity - Part 1

Provides an overview in basic electrical theory, including the affects of basic electrical factors (voltage, resistance, inductance) on operators and access controls.

\$100

Basics of Electricity - Part 2 - Circuits

Expands on the concepts from the Basics of Electricity Part 1 and provides an in depth look at Normally Open/Normally Closed contacts as well as Series & Parallel Circuits.

\$100

Solar Powered Automatic Gate Operators

Equips learners with a foundation in solar powered gate operators, including common components, and industry best practices for placement and installation.

\$100

UL325

Discusses UL325 safety standard, including entrapment protection and installation requirements, monitored devices, and usage classes.

\$150

Pedestrian Gates & Hardware

Provides an overview of pedestrian gates and hardware components including proper closers, hinges, and latching hardware as well as installation best practices.

\$0

Stand Alone Access Controls

Covers stand-alone access control devices and how they work, including common considerations for each.

\$0

Vehicle Detection

Equips learners with a foundation in vehicle detection, including loop types/ functions/size/placement, detector types/functions/settings, and loop alternatives.

\$100

Battery Backup & Emergency Access Devices

Discusses the basics of battery backup and provides a foundation in emergency access devices including KNOX, Click-2-Enter and SOS.

\$100

Intro to Trouble Shooting

Guides learners through the basics of trouble-shooting including diagnostic and testing tips.

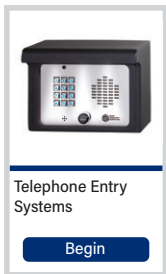

\$100

TRAINING OPPORTUNITIES

TELEPHONE ENTRY SYSTEMS & SMART VIDEO INTERCOM

Technical Training – Training on visitor management systems based on new and old technology.

Featured Course – Telephone Entry Systems

In this module we go through POTS line style hard wired Telephone Entry Systems (TES). We will discuss mounting, wiring, shared or dedicated lines as well as power wiring & grounding. More advanced training is coming soon!

***\$100 Per Learner**

(General access to the portal requires an annual \$50 subscription)
