Manage And Control Vehicle Access To Your Gated Community With TransCore's Card-Free and Hands-Free Systems

There are many reasons communities choose to have controlled access. Of primary concern is the safety of people, homes, property, and vehicles within the community. Gated, controlled access to a community gives management and residents the ability to help keep out unknown and unwelcomed people – from solicitors to vandals. Residents can enjoy the benefits of convenience and speed of access while benefiting from the control and security afforded by the RFID-based hands free system. As an example, use of TransCore's tags allows residents to approach the gate without rolling down their windows, thus preventing exposure to potential physical threats and environmental elements.

TransCore, the market leader in automatic vehicle identifications (AVI) solutions, uses time-proven radio frequency identification (RFID) technology to increase security, improve throughput, and enhance operational efficiency for your gated community residents, members and approved guests.

Security Is Increasingly Important

Residents and members feel safer inside secure vehicles. Utilizing TransCore's technology, they don't have to roll down the window to swipe a card. This hands-free solution increases their personal security and can also protect them from inclement weather.

Speed And Throughput Advantages For Residents And Members

Residents proceed through gated entries and exits more quickly, with limited distractions and delays. This improves traffic flow during peak times and helps reduce emissions that cause pollution.

Convenience That Residents Appreciate

Hands-free operations are very convenient, minimizing hassles, waiting time, and driver distractions. Residents and members don't have to fumble for an ID card, swipe or wave an access card, or punch a keypad to gain access. Additionally, windshield-mounted or vehicle-mounted tags mean no lost cards or tickets to deal with.

Interoperability

In locations where electronic toll collection is available, TransCore's multiprotocol readers enable regional interoperability. The same tag that is used on toll roads may be used in a variety of different applications including access control to private communities.

Sustainability Means Positive Impact On The Environment

Wireless RFID technology used for access control allows vehicles to enter and exit communities virtually without stopping, keeping access smooth and backups limited. This results in reduced idle times (estimated 25-30 percent) and significantly decreases carbon emission output.

Technology To Improve Your Community

As the transportation RFID pioneer, TransCore has deployed more than 46.3 million tags and 67,000 readers in transportation applications worldwide. TransCore's time-tested AVI solutions improve the way gated communities and recreational venues manage vehicle access and control. Benefits include increasing speed and convenience for residents, members and approved guests, while improving security. In a fast-paced world, it's essential to balance security with speed and convenience.

TransCore's parking and access products may be purchased through an international network of authorized dealers and distributors trained and supported by TransCore.
